Dear Dr. Hughes,

Diagnoses:

Painless visible haematuria

History

Mrs. Thompson presented with a single episode of frank haematuria one week ago. No pain, clots, or systemic symptoms. Non-smoker. No previous urological history.

Examinations

BP: 124/76 mmHg Weight: 70 kg Height: 164 cm BMI: 26.

Abdominal exam: No tenderness, no palpable masses.

Investigations to date

Urinalysis: Positive for blood, negative for nitrites/leucocytes.

Renal function: eGFR 92 mL/min.

Clinical summary

Given painless visible haematuria, further evaluation with upper and lower tract imaging and cystoscopy is required to exclude urothelial malignancy.

Allergies and adverse reactions: Penicillin – rash.

Changes to medications and medical devices

- Prescribed Phenazopyridine 200 mg TDS for 2 days for urinary discomfort post-investigation.

- No long-term medication changes at present.

Actions for healthcare professionals

- Arrange CT urogram within 2 weeks.
- Send urine cytology to pathology lab.

Actions for patient or their carer

- Maintain hydration; report any recurrent haematuria.

Information and advice given

Provided haematuria information leaflet.

Yours sincerely,

Dr. Priya Menon

Consultant Urologist
