RE: Patient Referral

Patient: Mr. Dean Winchester
DOB: 24/01/1979
NHI: WIN1979
Dear Urology Team,

I am writing to refer Mr. Dean Winchester, a 46-year-old gentleman who has attended today requesting a referral for permanent sterilisation.

He and his partner have completed their family and are certain they do not wish to have more children. He is well-informed about the procedure and its implications and is eager to proceed.

During the consultation, as part of a routine workup, I questioned him about his general health. He occasionally notes a slightly weaker urinary stream, but this does not bother him and he denies any other LUTS. He reports no issues with erectile function. His father also had some "prostate troubles" later in life, though the details are vague.

Given the family history, I performed a DRE which was entirely unremarkable, and checked a PSA, which came back at a perfectly reasonable 4.1 µg/L. A dipstick of his urine showed no abnormalities.

The primary purpose of this referral is for a vasectomy assessment. The other findings seem incidental and non-urgent, but I include them for completeness.

Thank you for seeing him.

Yours sincerely,

Dr. Robert Singer
