Dear Dr. Carter,

Diagnoses:
Prostate adenocarcinoma – Gleason 3+3 (Grade Group 1) – low risk

History
Mr. Harris was diagnosed with low-risk prostate cancer 2 years ago and has been managed with active surveillance. He remains asymptomatic. Recent PSA stable at 5.4 ng/mL.

Examinations
Digital rectal exam: No change from previous; prostate smooth, no nodules.

Investigations to date
PSA: 5.4 ng/mL (previously 5.6 ng/mL).
MRI prostate: No significant interval change.

Clinical summary
Continued stability; no indication for intervention at present.

Allergies and adverse reactions: NKDA.

Changes to medications and medical devices
None.

Actions for healthcare professionals

- Book repeat PSA and MRI before next review.

Actions for patient or their carer

- Continue current lifestyle measures; report new urinary or bone symptoms.

Information and advice given
Provided reassurance and prostate cancer surveillance leaflet.

Yours sincerely,

Dr. Amir Khan
Consultant Urologist
